

**Figure 6**

mRNA expression of all Cu/Zn-SOD genes in rice plants. The mRNA expression is expressed on fresh weight (F.W.) (red bars) and 18S ribosome expression (blue bars) basis. These results are expressed as mean  $\pm$  SD ( $n = 3-4$ ). Different alphabets indicate significant differences among different Pi application conditions (Tukey-Kramer's HSD test,  $p < 0.05$ ).
