

FIGURE 4 Response of steady-state transcript levels for *MYB14* to either 200 μ M AlCl₃ (2 h), 1 μ M Latrunculin B (LatB, 2 h), or a combination of Latrunculin B (LatB, 30 min) pretreatment followed by AlCl₃ (2 h) treatment. Data represent mean values and standard errors from three independent experimental series with three technical replications for each biological replicate. Transcript levels are calibrated to *EF-1 α* as internal standard. Asterisks indicate significant differences with* P<0.05 and ** P<0.01.
