

Table 2. The location of EML in the adult and pediatric patients with AE-AML.

Characteristic	Adults n=29 (%)	Children n=10 (%)	P-value
Presentation of EML			0.384
Sarcoma	19 (65.5)	5 (50.0)	
CNSL	10 (34.5)	5 (50.0)	
Location of sarcoma			0.032
Within or beside the spine *	14 /19	1/5	
On others #	5/19	4/5	
CNS infiltration			0.141
Sarcoma within or beside the spine and CNSL	24 (82.8)	6 (60.0)	
Without infiltration	5 (17.2)	4 (40.0)	

EML, extramedullary leukemia; CNSL, central nervous system leukemia.

* Of the 15 patients, there were 11 cases with sarcoma locating within or beside thoracic, two occurring throughout thoracolumbar sacral, one for each presenting within sacral and thoracolumbar.

Of the 9 patients, sarcoma occurred in lung (n=2), liver (n=2), pharynx and larynx, breast, temples, orbit and maxillary sinus (one for each).
