

Table-5: Independent risk factors in CCAP development based on multivariate logistic regression

	Community-acquired pneumonia		Complicated community acquired pneumonia		OR (%95 CI)	p
	n	%	n	%		
Parapneumonic effusion (10mm< in USG)	3	3.22	12	66.66	4.24 (1.77-10.16)	<0.001
Respiratory distress (dyspnea and/or retractions)	3	3.22	10	55.5	3.04 (1.30-7.130)	<0.001
Hypoxia (<saO2 %92)	3	3.22	15	83.3	5.247 (1.58-9.46)	<0.001

Abbreviations: USG: torax ultrasonography; OR:odds ratio; CI: confidence interval;; SaO2: oxygen saturation measured with pulse oximeter
