

Fig.1. Scatter plot of hCG_{Act-D} in Act-D responders and Act-D-resistant cases of the training set (referred Wu X, et al.¹) and the testing set.

The y-axis shows the log-hCG values due to the wide range of values (5.76–16,664 IU/L in training set and 5.8–147,321 IU/L in testing set) and most of cases with values under 1,000 IU/L (84.27% in training set and 69.57% in testing set).

Act-D, actinomycinD; hCG_{Act-D}, serum hCG level before Act-D salvage therapy.
