

**Table 2.** Significant hits in urine and plasma obtained from Volcano plots, including mean fold-changes of normalized intensity in the inhibition session versus control session, and mean fold-change of normalized intensity in the PM subjects versus EM-UM subjects.

<i>m/z</i>	RT (min)	Ionization Mode	<i>Inhibition session vs Control session (n = 37)</i>		<i>PM subjects (n = 6) vs EM-UM subjects (n = 37)</i>
