

Table 6. Prevalence of each component of Revised Geneva Score

|  | Prevalence | Prevalence when PE diagnosed (with imaging) | Prevalence when V/Q or CTPA showed no PE | Prevalence when patient did not undergo imaging for PE |
|--|------------|---|--|--|
| Over 65 years of age   | 512        | 28 (5.5%)                                   | 244 (47.7%)                              | 240 (46.8%)  |
| Previous DVT or PE   | 106        | 11 (10.4%)                                  | 43 (40.6%)                               | 52 (49.0%)   |
| Surgery (under general anaesthesia) or lower limb fracture in past month | 29         | 2 (6.9%)                                    | 14 (48.3%)                               | 13 (44.8%)   |
| Active malignancy  | 53         | 4 (7.5%)                                    | 29 (54.7%)                               | 20 (37.8%)   |
| Unilateral lower limb pain   | 54         | 4 (7.4%)                                    | 21 (38.9%)                               | 29 (53.7%)   |
| Haemoptysis  | 22         | 2 (9.1%)                                    | 7 (31.8%)                                | 13 (59.1%)   |
| Heart rate 75-94/min   | 823        | 23 (2.8%)                                   | 278 (33.8%)                              | 522 (63.4%)  |
| Heart rate $\geq$ 95/min   | 475        | 29 (6.1%)                                   | 166 (34.9%)                              | 280 (58.9%)  |
| Pain on examination of lower limb and unilateral oedema                  | 16         | 3 (18.8%)                                   | 6 (37.5%)                                | 7 (43.8%)  |
