

148 egg-sensitized infants underwent low-dose OFC  
(May 2016 to December 2018)

61 patients were excluded because the threshold dose was not fully evaluated  
15 did not receive medium-dose OFC after negative low-dose OFC  
34 did not receive high-dose OFC after negative medium-dose OFC  
12 were not evaluated if they could consume full-dose after negative high-dose OFC

87 patients were included in the analysis of this study

Low-dose OFC (1/25 of a heated whole egg)  
n = 87

75 passed

12 failed

Medium-dose OFC (1/8 of a heated whole egg)  
n = 75

66 passed

9 failed

High-dose OFC (1/2 of a heated whole egg)

58 passed

8 failed

Confirmed to increase egg consumption up  
to one heated whole egg at home (n = 26)

Full-dose OFC (one heated whole egg)  
n = 32

30 passed

2 failed

26 were able to ingest one heated whole egg
