

Figure 3: Family 2, father.

The patient has an untreated craniofacial anomaly presented as a class III malocclusion. The patient was referred to our department for a solution with a fixed dental prosthesis. The patient had removable dental prosthesis for 25-30 years. A, E: Patient prior to bone augmentation. F: Postoperative after bone augmentation, autologous bone augmentation with iliac crest bone graft. Bilateral sinus augmentation and onlay procedure was performed. B, G: 1 year after implant placement and 1,5 year after bone augmentation. C: 3 years after implant placement. D, H, I: 7 years follow up after implant placement.
